Summary

Senior iOS Engineer with 10+ years of experience in consumer apps. At Birmarket, a marketplace with 2M+ customers, extracted feature modules from the monolith into SPM packages and turned Premium Subscription into an SDK shared by three apps. Built the Drinkit coffee-ordering app from scratch as part of the iOS team, and owned the Apple Watch app for a voice AI assistant. Since 2026, ships App Store apps with an AI-first workflow.

Skills

iOS: Swift, SwiftUI, UIKit, Objective-C, Swift Concurrency (async/await, actors), Combine, MVVM, Clean Architecture, Modular Architecture, Swift Package Manager (SPM), SDK Development, REST APIs, Performance Optimization

Apple frameworks: StoreKit 2, CloudKit, Core Data, WidgetKit, App Intents, Live Activities, CarPlay, watchOS, MapKit, Core Location, Apple Foundation Models

Testing, CI/CD & Release: XCTest, Swift Testing, Unit Testing, Integration Testing, Xcode Instruments, CI/CD, GitLab CI, Bitrise, GitHub Actions, App Store Connect, A/B Testing, Feature Flags, Firebase, PostHog

Agentic development: Claude Code, Codex

Experience

> **Independent iOS Developer | Own apps** | Aug 2026 - Present
>
> *AI-first development*
>
> Architected the iOS clients, on-device AI integration and the CarPlay app. Directed AI coding agents through implementation and personally reviewed concurrency, business logic and tests.
>
> - DriveCheckUA: air raid alerts for drivers on iPhone and CarPlay, with an on-device AI summary, widgets and a Live Activity, all targets in Swift 6 language mode, plus an Android version built with AI agents.
> - OneCart Family: a family shopping list shared through iCloud that works offline, with widgets.
>
> *SwiftUI, CarPlay, WidgetKit, Apple Foundation Models, Core Data, CloudKit, GitHub Actions, Claude Code, Codex*

> **Senior iOS Engineer | GlobalLogic (contract)** | Kyiv, Remote | Jan 2026 - Jul 2026
>
> *AI voice assistant on Apple Watch*
>
> An R&D product for field workers. Owned the watch app and its iPhone relay end to end in a team of seven with product, analysts and design, working with the AI team.
>
> - Built the watch app's real-time voice conversation with the AI assistant through an iPhone relay, with a workout session keeping the watch app active.
> - Turned structured AI responses into on-screen actions, alerts and haptics on the watch.
> - Developed work-site maps with hazards and navigation, arrival detection, and the emergency flow.
>
> *Voice AI, Structured Outputs, SwiftUI, WatchKit, WatchConnectivity, WebSockets*

> **Senior iOS Engineer | Competo (Birmarket)** | Kyiv, Remote | Apr 2022 - Jan 2026
>
> *Birmarket | E-commerce marketplace*
>
> 2M+ customers. Developed features across the marketplace and loyalty. Built Premium Subscription on iOS from its first version, a paid membership with points, partner offers and raffles that reached 36% of active customers.
>
> - Built core e-commerce flows in UIKit and SwiftUI: the infinite-scroll product feed, cart, checkout and delivery, the customer profile, in-app merchandising, and the Premium Subscription loyalty program.

- Extracted about seven of the app's 30+ feature modules from the monolith into SPM packages and broke the cyclic dependencies between them.
- Rebuilt Premium Subscription as a SwiftUI and Clean Architecture SDK so its benefits reached Birmarket, Birbank banking and M10 wallet users, distributed as a remote Swift package and decoupled from the hosts with its own network layer and analytics.
- Moved the subscription's business logic and network layer from GCD to Swift Concurrency, and raised its unit test coverage from about 45% to 80% with AI coding tools.
- Through several A/B-tested iterations of the subscription onboarding, raised new-subscriber conversion to about 7-8%.
- Migrated screens from UIKit to SwiftUI.
- Profiled features with Xcode Instruments and removed memory leaks, UI hangs and scroll jank.
- Controlled feature releases remotely with feature flags, kill switches and Firebase Remote Config.
- Fixed production crashes and traced potential ones in an app whose crash-free rate usually held at 99.97-99.99%.
- Onboarded new iOS developers to the whole app's codebase, architecture and code review.

SwiftUI, UIKit, Combine, Swift Concurrency (async/await, actors), Swift Package Manager (SPM), SDK Development, Clean Architecture, MVVM, Bitrise, Integration Testing, A/B Testing, PostHog, APNs

Senior iOS Engineer | Drinkit | Kyiv, Remote | Feb 2020 - Feb 2022

Drinkit app | Coffee ordering

Drinkit is an app-first coffee brand, now with 250+ coffee shops. One of three iOS engineers, alongside two Android engineers, who built the Drinkit app from scratch.

- Shipped the menu, ordering and pickup flows in UIKit for the first coffee shop's launch. The app handled about 95% of orders as the chain grew to eight shops.
- Built the drink customization and its price calculation.
- Owned the dynamic menu, the app's signature feature, personalized for each customer by preference and time of day.
- Made the menu and its drink videos work offline, with downloads that continue in the background.
- Integrated contextual offers and order status updates.
- Worked with A/B tests, feature flags and remote configuration, and took part in the business decisions made from A/B results.
- Ran App Store releases, set up the release CI pipeline, and covered pricing and cart logic with unit and integration tests.
- Assembled a mobile team of former colleagues, iOS and Android, and brought it into the project.

Swift, UIKit, AVFoundation, Unit Testing, GitLab CI, A/B Testing

Earlier experience | SOLVVE, GBKSoft, freelance | 2014 - 2020

Developed iOS apps in Swift and Objective-C at SOLVVE, GBKSoft and in other projects: an esports tournament platform, an e-commerce store, a parking map and an app for Bluetooth tracker prototypes.

Swift, Objective-C, UIKit, Core Location, CoreBluetooth
