Max Vilchevskiy

Senior iOS / Product Engineer | Swift, SwiftUI, UIKit

Kyiv, Ukraine

vil4max@gmail.com | linkedin.com/in/vil4max | github.com/vil4max | vil4max.com | t.me/vil4max

Summary

Senior iOS / Product Engineer with 13 years of experience in consumer apps. Owned Premium Subscription on iOS for a marketplace with 2M+ customers, rebuilt it as an SDK shipped in three apps, and built and A/B-tested the onboarding that raised new-subscriber conversion. Now builds and releases his own apps: DriveCheckUA and OneCart Family are on the App Store.

Skills

iOS: Swift, SwiftUI, UIKit, Objective-C, Swift Concurrency (async/await), Combine, MVVM, Clean Architecture, Modular Architecture, SDK Development, REST APIs, Performance Optimization

Apple frameworks: StoreKit 2, CloudKit, Core Data, WidgetKit, App Intents, Live Activities, CarPlay, watchOS, MapKit, Core Location, Apple Foundation Models, LLM Integration

Testing, CI/CD & Release: XCTest, Swift Testing, Unit Testing, Integration Testing, Xcode Instruments, CI/CD, GitLab CI, Bitrise, GitHub Actions, TestFlight, App Store Connect, A/B Testing, Feature Flags, Firebase, PostHog

AI tools: Claude Code, Codex

Experience

> **Senior iOS Engineer, Own Products (self-employed) | DriveCheckUA, OneCart Family** | **Jul 2026 - Present**
>
> *Own products*
>
> Two apps on the App Store. Makes the product and technical decisions and handles code review and releases.
>
> - Shipped DriveCheckUA, a CarPlay safety app with an on-device AI summary, to the App Store. CI fails the build if an approved requirement has no test.
> - Built a StoreKit 2 subscription flow (entitlements, transaction verification, unit tests), ready to enable.
> - Released OneCart Family, a family shopping list shared through iCloud, with five App Store updates in September 2026.
> - Building PitStop, a car-maintenance app, now on TestFlight.
>
> *Swift, SwiftUI, Swift Concurrency (async/await), LLM Integration*

> **Senior iOS Engineer | GlobalLogic (contract)** | **Kyiv, Remote | Jan 2026 - Jul 2026**
>
> *AI voice assistant on Apple Watch*
>
> A hands-free Apple Watch assistant that let field workers report status and ask questions by voice, delivered to the customer's executives as a TestFlight build. Owned the watch app end to end.
>
> - Built the voice interface on the watch and mapped structured LLM responses to on-screen actions, alerts, and haptics.
> - Developed work-site maps for the watch with hazard areas and compass-guided navigation, plus arrival detection on the iPhone.
> - Designed and implemented the emergency flow on watchOS.
> - Implemented real-time audio streaming between the watch and the AI backend through an iPhone relay.
>
> *Voice AI, LLM Integration, Structured Outputs, SwiftUI, WatchKit, WatchConnectivity, WebSockets*

Senior iOS Engineer | PASHA Holding (Birmarket) | Kyiv, Remote | Apr 2022 - Jan 2026

Birmarket | Online marketplace

Birmarket started as Umico and grew to 2M+ customers. On the Loyalty team, built Premium Subscription and expanded it from a single feature into a full module.

- Built marketplace features across the app in UIKit and SwiftUI, including deep-link navigation, and migrated 15+ screens from UIKit to SwiftUI.
- Extracted feature modules and shared infrastructure into Swift packages as the team modularized the monolith, and fixed performance issues in the legacy code: memory leaks from retain cycles and UI hangs.
- Rebuilt Premium Subscription as a SwiftUI and Clean Architecture SDK, shipped in a marketplace, a banking app, and a payment wallet. Raised its unit-test coverage from about 15% to 80%.
- Built the subscription onboarding and A/B-tested it from five screens down to three, raising new-subscriber conversion. Reviewed code, onboarded two iOS engineers, and set up feature flags.
- Took on-call crash-monitoring shifts, with the crash-free rate above 99.9%.

SwiftUI, UIKit, Combine, Swift Concurrency (async/await), Swift Package Manager (SPM), SDK Development, Clean Architecture, MVVM, CI/CD, Integration Testing, A/B Testing, PostHog, APNs

Senior iOS Engineer | Drinkit | Kyiv, Remote | Feb 2020 - Feb 2022

Drinkit app | Digital-first coffee brand

Drinkit is an app-first coffee brand, now with 250+ coffee shops. Brought an existing mobile team into Drinkit and built the iOS app with it from scratch alongside product, design, and backend.

- Shipped the menu, ordering, and pickup flows in UIKit for the first coffee shop's launch. Kept developing the app, which handled nearly all orders, as the chain grew to eight shops.
- Built much of the drink customization, including client-side price calculation.
- Owned the dynamic menu, the app's signature feature: client-side logic that built each customer's menu from the backend catalog by preference and time of day, with looping drink videos cached offline.
- Ran App Store releases, set up the release CI pipeline, and wrote unit tests for pricing and cart state.

Swift, UIKit, GCD, MVP (Model-View-Presenter), AVFoundation, Payment SDK Integration, Unit Testing, GitLab CI, A/B Testing

Senior iOS Engineer | SOLVVE | Kyiv, On-site | Jan 2019 - Feb 2020

PLAYHERA | Esports tournament platform

PLAYHERA was an international esports platform for organizing online tournaments. Developed features for the existing iOS app on the product team.

- Added tournament-management features in UIKit within the app's feature-module architecture.
- Reviewed teammates' code and contributed to App Store releases.

Swift, UIKit, Auto Layout, Code Review

iOS Developer | Early commercial work | Kyiv | Dec 2013 - Nov 2018

Started in Objective-C and moved to Swift. Worked solo and in product teams. Consumer, fintech, healthcare, and e-commerce apps. Shipped most of them to the App Store.

- Built maps and location, a 3D body model, audio playback, offline records, and payments.

Objective-C, Swift, SnapKit, CoreBluetooth, SceneKit, Core Data, Core Location, Apple Pay, Stripe
